

PROJECT NAME:

MAAN MEET

“We care. We listen. We support.”

NAME: S.Tanushree

COLLEGE: Kendrapara Autonomous College, Kendrapara

Maan Meet

We care. We listen. We support.

INTRODUCTION :

- Maan Meet is an AI-based Mental Health Support Chatbot designed to provide emotional support, stress management guidance, a safe space for users to express their feelings, and mental wellness assistance through interactive conversations.
- The system creates a safe and comfortable environment where the users can freely express their feelings without fear of judgement.
- Maan Meet helps individuals cope with stress, anxiety, loneliness, and emotional struggles by offering supportive conversations, mood tracking, relaxation activities, motivational guidance, and self-care resources.
- The main goal of the project is to make mental health support more accessible, comforting, and available anytime, helping users heal one conversation at a time.

PROBLEM STATEMENT:

- Nowadays, mental health problems such as stress, anxiety, depression, loneliness, and emotional pressure are increasing rapidly among every citizen ,irrespective of their age, gender, caste or financial status.
- Due to academic pressure, workload, family problems, social isolation, and social media influence, many individuals struggle emotionally in their daily lives.
- However, despite facing mental stress , many people hesitate to seek professional help because of fear of judgement , lack of awareness, expensive therapy sessions, and limited access to counselors or psychologists.
- Many individuals feel uncomfortable sharing their emotions with others and often suffer silently without proper emotional support.
- In some cases, people may not even realize the seriousness of their mental health condition until it begins affecting their studies, work performance, relationships, and overall well-being.
- Traditional counselling services may not always be available immediately, especially during emotional emergencies or late-night situations when people need someone to talk to the most.
- There is also a lack of accessible, affordable, and user-friendly platforms that provide instant emotional guidance and mental wellness support. Because of this gap, many users feel isolated, unheard, and emotionally exhausted.

- To address these issues, “Maan Meet” is proposed as an AI-based Mental Health Support Chatbot that provides a safe, supportive, and judgement-free environment for users.
- The chatbot helps users express their feelings, receive emotional support, track moods, access stress-relief activities, and improve their mental wellness through interactive conversations.
- The system aims to make mental health support more accessible, comforting, and available anytime, helping users heal emotionally.

WHY DOES THE PROBLEM EXIST?

=>The problem exist due to several reasons:

■ACADEMIC PRESSURE

Students often face stress due to exams, assignments, competition, and expectations from parents and teachers. Fear of failure and achieving good grades can affect their mental well-being.

■WORKLOAD AND CAREER PRESSURE

Working professionals experience stress because of deadlines, long working hours, job insecurity, and the pressure to perform better in their careers.

■ FINANCIAL PROBLEMS

Managing expenses, paying bills, loans, education costs, and family responsibilities can create significant stress for individuals and families.

■FAMILY AND RELATIONSHIP ISSUES

Conflicts with family members, misunderstandings, breakups, marital problems, or lack of emotional support can negatively affect mental health.

■SOCIAL MEDIA INFLUENCE

Constant comparison with others' lifestyles, achievements, and appearances on social media can lead to feelings of inadequacy, anxiety, and low self-esteem.

■ LONELINESS AND SOCIAL ISOLATION

Many people feel lonely despite being surrounded by others. Lack of meaningful relationships and emotional connection can increase stress and sadness.

■ HEALTH-RELATED CONCERNS

Personal illnesses, chronic diseases, physical disabilities, or worrying about the health of loved ones can create emotional and mental stress.

■ UNCERTAINTY ABOUT THE FUTURE

Concerns about education, career growth, financial stability, relationships, and life goals often make people anxious about what lies ahead.

■ LACK OF WORK-LIFE BALANCE

People often struggle to balance studies, work, family responsibilities, and personal life, leaving little time for relaxation and self-care.

■ EMOTIONAL SUPPRESSION

Many individuals avoid expressing their feelings because they fear being judged or misunderstood. Keeping emotions bottled up for a long time increases stress and emotional burden.

■ MAJOR LIFE CHANGES

Events such as changing schools, moving to a new city, starting a new job, marriage, retirement, or losing a loved one can be emotionally challenging.

■ HIGH EXPECTATIONS FROM THE SOCIETY

Society often expects people to be successful, productive, attractive, and financially stable, creating pressure to meet unrealistic standards.

Who are the stakeholders?

To establish clear boundaries for system administration and system users, the stakeholders of “Maan Meet” are classified into:

1).INTERNAL USERS:

These users are responsible for managing and maintaining the mental health support system.

★System Administrator -Manages user accounts, system settings, security, and overall application performance.

★Developers -Design, develop, update, and improve the application's features and functionality.

★Technical Support Team -Assists users with Technical issues, bugs, and system-related problems.

★Database Administrators -Maintains user data, mood records, chat history, and ensures data security.

★AI/Chatbot Management Team -Trains, updates, and monitors the chatbot to provide accurate and supportive responses.

★Content and Mental Wellness Managers -Creates wellness Content, self-care activities, motivational messages, and mental health resources.

★System Maintenance Staff -Responsible for monitoring the system regularly and ensuring that all features work properly.

2.)EXTERNAL USERS:

These users interact with the system to receive mental health support and wellness services.

★Students -Use the platform to manage academic stress, exam anxiety, and emotional pressure.

★Working Professionals -Seek support for workplace stress, burnout, and work-life balance issues.

★Teenagers and Young adults- Use the platform to manage academic stress, exam anxiety, and emotional pressure.

★Adults and Senior Citizens-Access emotional support, mood tracking, and wellness activities to improve mental well-being.

★Individuals facing mental health challenges-Use the chatbot and professional consultation services for stress, anxiety, loneliness, and emotional difficulties.

★Psychologists and Counselors-Interact with users by providing professional guidance, therapy sessions, and mental health support.

★Educational Institutions-May collaborate with the platform to support student mental wellness programs.

★Healthcare and Wellness Organizations-Can utilize the platform to promote mental health awareness and support services.

★Gyms, cafés, restaurants, and wellness centers-Can collaborate with Maan Meet to create mood-enhancing and wellness-focused experiences for users.

EXPECTED SYSTEM USERS:

- Students
- Working professionals
- Teenagers and Young adults
- Adults and Senior Citizens
- General Users
- Individuals with Mental Health Challenges
- Psychologists and Counselors
- System Administrator
- AI/Chatbot Management Team
- Technical support and Maintenance Team
- Educational Institutions
- Corporate Offices and Organizations

- Gyms and Fitness Centers
- Cafés and Restaurants
- Wellness centers and hospitals

OBJECTIVE :

- To provide immediate emotional support to individuals who feel stressed, anxious, lonely, or overwhelmed in their daily lives through chatbot conversations.
- To create a safe and judgment-free space where users can openly express their feelings without fear of criticism.
- To help students cope with academic pressure, examination stress, and career-related anxiety.
- To assist working professionals in managing workplace stress, burnout, and work-life balance issues.
- To encourage users to develop healthy emotional habits through self-care activities and mental wellness guidance.
- To help users identify and understand their emotional patterns through regular mood tracking and analysis.
- To reduce feelings of loneliness by providing a supportive AI companion available 24/7.
- To promote awareness about mental health and encourage people to seek help when needed.
- To provide coping strategies, relaxation techniques, and stress-management exercises for everyday challenges.
- To make mental health support accessible, affordable, and available anytime regardless of age, location, or background.
- To provide emergency mental health resources and helpline support during critical situations.
- To improve overall emotional well-being and promote self-awareness, confidence, and self-love among users.

SCOPES:

“Maan Meet aims to provide a safe, supportive, and user-friendly mental health platform that promotes emotional well-being and self-care.”

■USER REGISTRATION AND PROFILE MANAGEMENT

Create and manage user accounts securely. Store personal details and mood history safely.

■ 24/7 AI EMOTIONAL SUPPORT

Maan Meet provides instant emotional support through an AI chatbot that is available anytime. Users can share their thoughts, feelings, stress, or personal problems and receive supportive responses without waiting for appointments.

■ MOOD TRACKING AND EMOTIONAL MONITORING

Users can record their daily moods and emotions. The system analyzes mood patterns over time and helps users understand what factors affect their mental well-being.

■ PERSONALIZED MUSIC THERAPY

Based on the user's emotional state, the app recommends calming music, healing playlists, nature sounds, meditation tracks, and focus music to reduce stress and improve mood at any time of the day.

■ PROFESSIONAL PSYCHOLOGY SUPPORT

Users can connect with certified psychologists, counselors, and mental health professionals through chat, voice calls, or video sessions whenever professional guidance is required.

■ COMMUNITY SYSTEM AND COLLABORATION

The platform allows users to join support groups, wellness communities, and group discussions where people facing similar challenges can share experiences, coping strategies, and encouragement.

■ STRESS MANAGEMENT AND WELLNESS ACTIVITIES

The application provides breathing exercises, guided meditation, mindfulness sessions, journaling activities, and relaxation techniques to help users manage daily stress.

■EMERGENCY MENTAL HEALTH ASSISTANCE

In critical situations, the system provides emergency helpline numbers, crisis resources, and quick access to mental health professionals for immediate support.

■SUBSCRIPTION-BASED PREMIUM SERVICES

The application offers both free and premium plans. Premium subscribers receive unlimited psychologist consultations, advanced mood analysis, personalized wellness programs, exclusive meditation content, and priority support.

■PERSONALIZED HEALING JOURNEY

Maan Meet creates a customized wellness plan for each user based on emotional history, mood patterns, interests, and personal goals, helping them improve their mental health gradually.

■ACCESSIBILITY AND CONVENIENCE

The platform can be accessed through mobile devices and computers, allowing users to receive emotional support, listen to music, track moods, and connect with professionals from anywhere and at any time.

■PRIVACY AND SECURE DATA MANAGEMENT

Maintain confidentiality of user conversations and emotional records. Ensure secure storage and protection of user information.

■ADMIN AND SYSTEM MANAGEMENT

Allow administrations to manage users and monitor System performance. Help maintain chatbot responses and mental wellness resources.

■COLLABORATION

Maan Meet can collaborate with gyms, cafés, restaurants, wellness centers, and public spaces to provide mood-based music, relaxation experiences, and emotional wellness recommendations based on the user's mental state.

EXPECTED OUTPUTS :

- Improvement in emotional well-being and mental peace.
- Reduction in stress, anxiety, loneliness, and emotional pressure.
- Better emotional expression and communication skills.
- Increased self-awareness and understanding of personal emotions.
- Development of positive thinking and self-care habits.
- Improved mood through regular emotional support and wellness activities.
- Better stress management through meditation and relaxation exercises.
- Increased confidence and emotional stability in daily life.
- Feeling emotionally supported, heard, and less isolated.
- Easier access to mental health guidance and emotional assistance anytime.

Hands-on Activity:

1.)OPERATIONAL LEVEL INFORMATION

- Daily user chat interactions with the AI chatbot.
- User mood check-ins and mood tracking records.
- Appointment bookings for psychologist consultations.
- Daily music, meditation, and wellness activity usage.
- User login, registration, and profile updates.
- Emergency support requests and helpline access.
- Community posts, comments, and user engagement activities.
- Subscription purchases and payment transactions.

2.)TACTICAL LEVEL INFORMATION

- Analysis of user mood trends and emotional patterns over weeks or months.
- Monitoring the effectiveness of chatbot responses and wellness activities.
- Tracking psychologist consultation demand and appointment statistics.
- Analyzing user engagement, active users, and feature usage patterns.
- Reviewing subscription growth and premium service usage.
- Identifying common mental health concerns to improve support services.
- Evaluating community participation and user feedback for better decision-making.

3.)STRATEGIC LEVEL INFORMATION

- Identifying long-term mental health trends among users to develop new services and features.
- Planning future collaborations with psychologists, wellness centers, educational institutions, and organizations.
- Analyzing overall user growth and market demand for expansion of the platform.
- Making decisions regarding new technologies, AI improvements, and premium services.
- Developing long-term strategies to improve mental wellness awareness and accessibility.
- Evaluating the overall impact of Maan Meet on users' emotional well-being and quality of life.
- Planning business growth, partnerships, and future revenue opportunities.

USE CASE ACTIVITIES:

What are done by users:

1. User (Students, Professionals, General Users)

- Register / Login
- Complete Profile Setup
- Chat with AI Chatbot

- Track Daily Mood
- Write Journal Entries
- Listen to Mood-Based Music
- Join Community Discussions
- Book Psychologist Consultation
- Make Subscription Payment
- View Personalized Wellness Plan
- Access Meditation & Breathing Exercises
- Contact Emergency Support
- Rate & Review the Application
- Manage Profile & Settings
- Logout

2. Psychologist / Counselor

- Login
- View Appointment Requests
- Accept / Reject Consultation Requests
- Conduct Chat / Voice / Video Sessions
- View User Progress Reports
- Provide Mental Health Guidance
- Update Consultation Notes
- Logout

3. System Administrator

- Login
- Manage Users
- Manage Psychologists
- Manage Subscriptions & Payments
- Manage Community Posts

- Monitor Chatbot Performance
- View Reports & Analytics
- Manage Collaborations & Partners
- Send Notifications
- Logout

4. Collaboration Partners (Schools, Offices, Gyms, Cafés, Restaurants)

- Login to Partner Portal
- Register Organization
- Schedule Wellness Programs
- Access Mood-Based Wellness Content
- View Participation Reports
- Collaborate with Epiphany Events
- Logout

USE CASE ACTIVITY DIAGRAM:

CONCLUSION:

Maan Meet aims to create a safe and supportive space where users can express their emotions freely and receive instant emotional support. The project helps promote mental wellness, self-care, and positive emotional growth through interactive and comforting conversations.
