

Project Name

Bharat Mitra – Smart Citizen Assistance Platform

2. Problem Statement

Many citizens face difficulties in accessing information about government schemes, scholarships, job opportunities, healthcare services, and emergency contacts because the information is scattered across multiple sources. This creates confusion, delays, and lack of awareness among people, especially in rural and remote areas.

3. Why Does This Problem Exist?

- Lack of awareness about government schemes and benefits.
- Information is available on multiple websites and portals.
- Low digital literacy in rural areas.
- Difficulty in finding reliable and updated information.
- Limited access to guidance and support services.
- Language barriers that prevent understanding of official information.

4. Stakeholders

Internal Users

- System Administrator
- Content Manager
- Database Administrator
- Technical Support Team

External Users

- Students
- Job Seekers
- Citizens
- Senior Citizens

- Government Departments

Expected System Users

- Students looking for scholarships
- Job seekers searching for employment opportunities
- Citizens seeking government scheme information
- Rural residents requiring service assistance
- Senior citizens needing easy access to information

5. Objectives of the Project

1. Provide a centralized platform for citizen services.
2. Increase awareness about government schemes and welfare programs.
3. Help students find scholarships and educational opportunities.
4. Provide job-related information and alerts.
5. Offer healthcare and emergency service information.
6. Reduce the time required to search for important information.
7. Support multiple languages for better accessibility.
8. Promote digital inclusion and citizen empowerment.

6. Proposed Solution

Bharat Mitra is a smart web and mobile platform that acts as a one-stop solution for citizens. The platform collects and organizes information related to government schemes, scholarships, jobs, healthcare services, and emergency contacts in a simple and user-friendly manner.

An AI-powered chatbot will guide users and answer their queries in multiple languages.

7. System Modules

Module 1: Government Scheme Portal

- Search schemes by category
- Eligibility checker
- Application guidance

Module 2: Scholarship Information System

- Scholarship database
- Eligibility criteria
- Deadline notifications

Module 3: Job Opportunity Portal

- Government job alerts
- Private sector opportunities
- Skill development programs

Module 4: Healthcare Services

- Hospital information
- Health schemes
- Medical emergency support

Module 5: Emergency Contact Directory

- Police
- Ambulance
- Fire Services
- Disaster Management Helplines

Module 6: AI Citizen Assistant

- Chatbot support

- Multilingual assistance
- Frequently Asked Questions

Module7:MultiLanguageSupport

English

Hindi

Odia

Additional regional languages

. Expected Outputs

- Government Scheme Search Portal
- Scholarship Information Dashboard
- Job Notification System
- Emergency Contact Directory
- Healthcare Service Information Portal
- AI-Based Citizen Assistance Chatbot
- User-Friendly Web/Mobile Interface
- Reports and Analytics Dashboard

Benefits of the Project

- Easy access to government services.
- Increased awareness among citizens.
- Time-saving and efficient information retrieval.
- Better support for rural populations.
- Improved digital literacy.
- Enhanced citizen-government interaction.

- Inclusive access through multilingual support

.

Future Scope

- Voice-based assistant in regional languages.
- Integration with government APIs.
- Mobile application deployment.
- Personalized recommendation system.
- Real-time notification service.
- AI-powered eligibility prediction for schemes.
