

Title of Work: REVARA Fashion – An Integrated Digital Platform for Reselling, Recycling, Customization, and Sustainable Fashion Ecosystem

Nature of Work: Online Platform (Website and Mobile Application) combining reselling, recycling, design customization, sustainable fashion workflows, and eco-impact measurement.

1. STATEMENT OF CLAIM

We, the undersigned creators, hereby declare authorship and originality of the work titled “**REVARA Fashion**”. This work consists of a comprehensive platform design, user workflows, operational processes, and integrated systems that enable the reselling, recycling, and redesigning of clothes in a single digital ecosystem.

The platform is original in conception, design, and execution, and to the best of our knowledge, no identical or substantially similar platform currently exists in India or internationally. We claim copyright protection over the **conceptual model, workflow design, user interaction framework, eco-impact dashboard, proof-of-task system, and the integrated digital ecosystem** described herein.

2. BACKGROUND

The Indian fashion and textile industry generates massive amounts of waste each year, with millions of tons of discarded clothing ending up in landfills. Existing platforms either focus solely on **reselling (e.g., OLX, Quikr)**, **fashion retail (e.g., Myntra, Amazon Fashion)**, or **limited recycling drives (e.g., H&M take-back programs)**.

However, no current platform integrates all elements of the **circular fashion economy**—resale, recycling, customization, design, eco-impact measurement and carbon-footprint tracking — into a **single digital workflow**.

REVARA Fashion addresses this critical gap by creating a transparent, traceable, and eco-conscious ecosystem that brings together sellers, buyers, agents, recyclers, designers, craftsmen, and administrators into one platform.

3. UNIQUENESS OF WORK

The originality of REVARA Fashion lies in the following features:

1. **Multi-Role Integration in a Single Platform** – The platform unifies all stakeholders (seller, buyer, agent, recycler, designer, and craftsman) into one ecosystem, ensuring smooth workflow and accountability.

2. **Proof-of-Task Verification System** – At every pickup, delivery, or task completion, agents submit proof through OTP authentication, QR codes, or digital signatures. This ensures traceability and prevents fraud or duplication.
3. **Eco-Impact Dashboard** – The platform uniquely tracks the environmental savings including water conserved, carbon emissions reduced, textile waste diverted from landfills and overall carbon footprint reduction. This data is displayed in real time to users which will make REVARA one of the first platform in India to provide measurable sustainable metrics.
4. **Revara Credits (Gamified Reward System)** – Users earn credits for recycling, reselling, or buying sustainable products. These credits can be redeemed for discounts or benefits, incentivizing eco-conscious behaviour.
5. **Dual Path for Buyers** – Buyers can either purchase pre-listed items or request customized designs using their own old clothes, bridging resale with personalization.
6. **Designer and Craftsman Workflow** – Designers can segregate items, create eco-friendly designs, and showcase original fashion pieces on the platform. Craftsmen receive designs, stitch the final products, and collaborate with designers for approvals. The quality checks and the performances of the designer and craftsmen will be done by the admin.
7. **Admin as Single Point of Contact (SPOC)** – The admin monitors every task validates completion, and releases payments to all parties. This ensures operational fairness, transparency, and trust.
8. **Database-Integrated Transparency** – Every task, status update, document submission, and approval is recorded in the system database, ensuring **accountability and non-duplicability**.

No existing platform combines these features into one system, making REVARA Fashion a **first-of-its-kind creation in India**.

4. BENEFITS TO SOCIETY, ENVIRONMENT, AND ECONOMY

a. Societal Benefits:

REVARA Fashion empowers individuals to earn by reselling or recycling unused clothes, provides affordable sustainable fashion to buyers, and generates employment for agents, designers, recyclers, and craftsmen. It also preserves traditional Indian textiles (such as sarees) by repurposing them into modern designs.

b. Environmental Benefits:

The platform reduces textile waste, and lowers carbon emissions by promoting reuse and recycling. By reducing dependency on new textile production, REVARA directly contributes to lowering the **overall carbon footprint** of fashion consumption. The Carbon footprint tracker within the platform quantifies how much greenhouse gas is avoided by each resale or recycling transaction, helping both users and society to understand the positive environmental impact.

c. Economic Benefits:

The platform promotes local designers and small-scale tailors by integrating them into the

digital ecosystem. It provides micro-entrepreneurship opportunities and supports India's sustainable fashion industry.

5. DISTINCTION FROM EXISTING PLATFORMS

Unlike **OLX or Quikr**, which focus only on resale without recycling or customization, REVARA integrates the entire fashion lifecycle. Unlike **Instagram thrift stores**, which operate informally and without traceability, REVARA provides verified proof-of-task and eco-impact tracking, including **carbon footprint analysis**. Unlike **H&M recycling drives**, which focus only on collecting old clothes, REVARA enables **reuse, redesign, resale, and eco-tracking in one platform**.

Therefore, the combination of services, the structured workflow, the eco-impact tracking with carbon emissions saved, and the reward-based sustainability model make REVARA Fashion **unique, original, and non-duplicable**.

6. SYSTEM REQUIREMENTS

Software Requirements:

- Node JS
- PHP
- Any Linux Distro for hosting server
- Apache for server
- Nginx as Load Balancer
- Database: MySQL
- File Storage: AWS and Google cloud storage
- Payment Gateway: Razorpay, PayTM, PayPal, Skrill (for international payments)

Client-Side (Users: Buyer, Seller, Agent, Recycler, Designer, Craftsman) :

- **OS:** Android 9+, iOS 13+, Windows 10+, macOS 11+
- **Browser:** Chrome / Firefox / Safari / Edge
- **Mobile App (Optional):** Android React Native, iOS (Swift)
- **UI Framework:** React.js

Development & Testing

- **IDE:** VS Code
- **Version Control:** Git + GitHub
- **Testing Tools:** Selenium / Postman
- **CI/CD:** Jenkins / GitHub Actions

Hardware Requirements:

Server-Side (Hosting Platform):

- **Processor :** Minimum Quad-core 2.4 GHz (Recommended Octa-core 3.0+ GHz)
- **RAM:** Minimum 4 GB (Recommended 8–12 GB)
- **Storage:** 256 GB SSD (Recommended 1 TB SSD + Cloud Backup)
- **Network:** 100 Mbps (Recommended 1 Gbps)
- **Server Type:** Cloud/Dedicated GCP

Client-Side (Users: Buyer, Seller, Agent, Recycler, Designer, Craftsman):

- **Device:** Smartphone / PC (Dual-core 1.6 GHz, 2 GB RAM minimum)
- **Recommended:** Quad-core 2.4 GHz, 4–8 GB RAM
- **Internet:** 2 Mbps / 4G (Recommended 10+ Mbps / 5G or Broadband)
- **Storage:** 2 – 16 GB free space

7. ALIGNMENT WITH GLOBAL GOALS

REVARA Fashion supports multiple **United Nations Sustainable Development Goals (SDGs)**:

- **Goal 12 – Responsible Consumption and Production** (by promoting recycling and reuse).
- **Goal 13 – Climate Action** (by reducing carbon emissions).
- **Goal 8 – Decent Work and Economic Growth** (by generating employment for local craftsmen, agents, and recyclers).

This alignment further establishes its **social, environmental, and global significance**.

8. CLAIM OF ORIGINALITY

We affirm that the platform design, functional workflows, integration of multi-stakeholder systems, eco-impact dashboard with carbon footprint tracking, proof-of-task system, and gamified sustainability model are **original works** conceptualized and developed solely by us.

The work is not copied, derived, or adapted from any existing platform, and represents a **unique creation in the field of sustainable fashion and digital commerce**.

9. CONCLUSION

In light of the above, we request copyright and intellectual property recognition for **REVARA Fashion**, as it is a **unique, original, and socially beneficial platform** that integrates sustainability with technology. The platform not only provides innovation in fashion but also contributes meaningfully to environmental protection and sustainable economic growth.

We believe this comprehensive ecosystem is **the first-of-its-kind in India**, and deserves recognition and protection under copyright and intellectual property law.
